

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

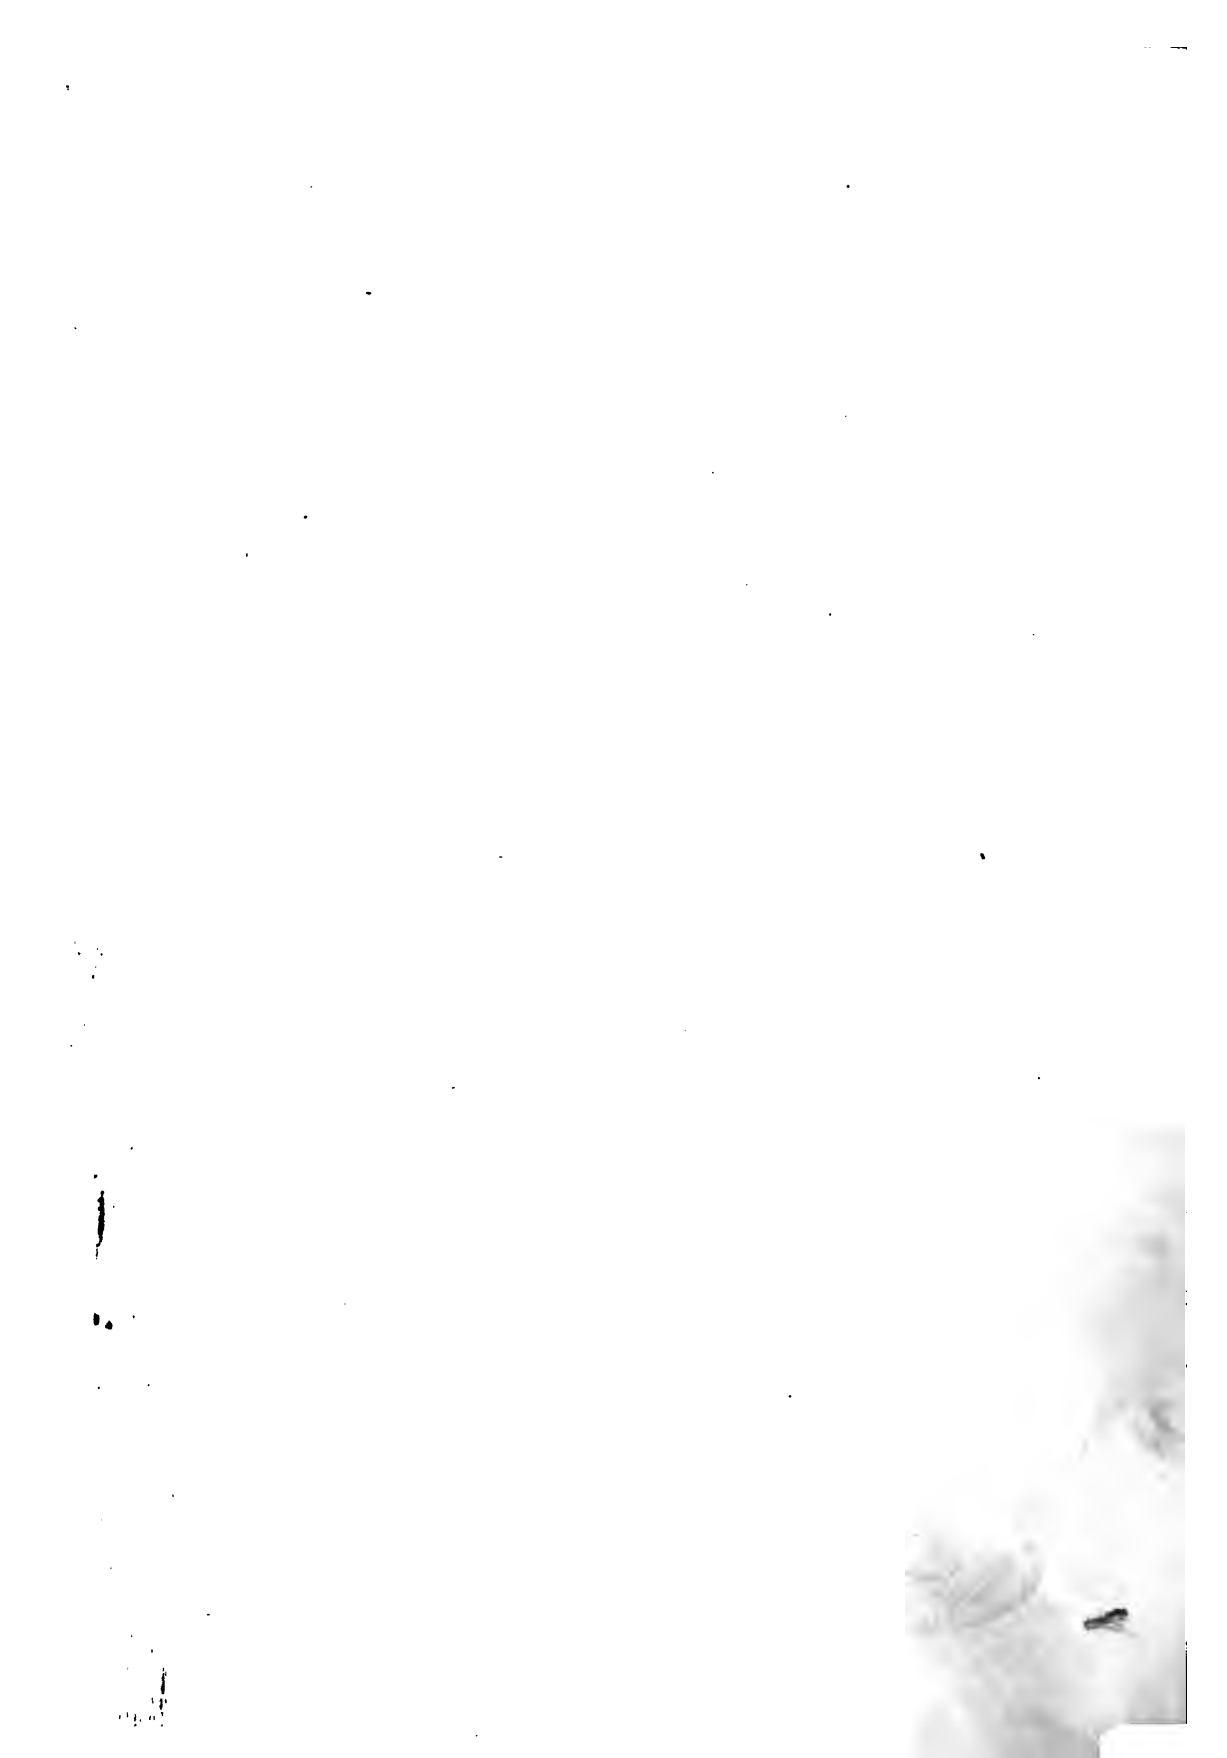

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. THIS Alphabetical Index has been prepared by the direction of the Library Committee of the Peabody Institute, to facilitate the purchase of Books for their contemplated Library; and hence, in no sense, is it to be regarded as the Catalogue of a Collection already in existence. It is a mere Purchase List, which the Committee will use in the selection of the works which they intend to place on their shelves. Such a list is absolutely necessary for those engaged in the *creation* of a Library, and who have not the leisure to consult a multitude of Catalogues and Bibliographies in making their selections. In the *extension* of a large Library, such a work as this would not be required, but in the commencement of a collection, it is indispensable.

The handling of so large a book in manuscript would be inconvenient and troublesome, and the transcription of a sufficient number of copies for the Committee would cost nearly as much as the printing; hence, it has been put in type, and only a few copies struck off to supply those who are appointed to make the selection and a few institutions.

The titles of many of the books have been abbreviated, but every one is full enough for the purpose intended. Every department of knowledge, except Medicine, Law and Romance, is sufficiently represented. The selection has been made with great care, and special attention has been paid to the presumed wants of our future readers.

Most of the anonymous works have been placed at the end of the volume, as more accordant with the rules of taste and elegance, and as more convenient for reference.

A classified list of the subjects, with the principal authors, has been added, and a special Alphabetical Index of Subjects, so that at a glance

the most prominent writers on any subject which the Catalogue contains, may be ascertained.

No man, who has never undertaken the compilation of a list like this, can have any idea of the immense difficulty and labor attending it. The difficulties and vexations increase as he advances, and, with his best efforts, the work will be but imperfectly performed. Our countryman, Stevens, the distinguished bibliographer of London, may well say, "If you are troubled with a pride of accuracy and would have it completely taken out of you, print a catalogue."

Some typographical errors were discovered when it was too late to correct them, but they will be found to be comparatively few after the letter C. Errors in Catalogue proof are much more apt to escape the detection of even the most practised proof reader than those of plain, narrative print.
